

# Bi-Agra™

## Premium Soil Moisture Retaining Agent THE PROFESSIONAL'S CHOICE

Bi-Agra™ from SST Australia is a new generation water retaining agent that has been specifically designed for home garden use where watering-in is restricted. Bi-Agra™ is a dual action product that allows soil to accept and retain water at the root zone for longer. Application of Bi-Agra™ prolongs turf health and vigour, ensures efficient water use and **increases water retention by up to 50%**, at the root zone of your lawn.

*Note: Bi-Agra™ is not a wetting agent, it is a dual action soil moisture retaining agent*

### Suitable for

Dry patch control in

- Home lawns and gardens
- Sporting Fields
- Cricket pitches
- Golf courses, fairways, and tees
- All hydrophobic turf situations

## This unique product helps your lawn require 50% less water over summer, surviving heat & water restrictions

Bi-Agra™ is a bi-active formula that provides both outstanding penetrations along with superior moisture retention. Bi-Agra™ strength is its ability to retain additional moisture in normally low water-retaining root zones. Unlike polyacrylamides which hold water tightly, Bi-Agra™ holds moisture in the soil, yet allows water availability through the normal process of osmosis as required by the roots. Bi-Agra™ should be used as a curative treatment on severely water repellent soils to assist with the rewetting of dry root zones. Bi-Agra™

- Can retain up to **5** times the amount of water against the root zone compared to untreated areas
- Is non-burning at recommended rates.
- Reduces turf wilting and moisture/heat stress
- Is environmentally friendly
- Is an easy hose on application
- A 2-litre bottle treats 150 m<sup>2</sup> of lawn and garden bed

When soil/sand is described as hydrophobic it means that it repels water. (Water pools on the surface and does not absorb). WA sands are notoriously hydrophobic

When used in combination with **Aqua Force** premium wetting agent, it helps keep your lawn healthy and green during Perth's summer heat and water restrictions.

Apply **Aqua Force** premium wetting agent initially, leaving at least four days before applying an application of **Bi-Agra™** soil moisture retainer. Make sure to water both, in really well.

## Bi-Agra™ premium soil moisture retaining agent is recommended for use at the following times and should be applied a minimum of three times a year.

Turf Growers Association WA members recommend applying Aqua Force and Bi-Agra™ at the beginning of Spring (September) and Summer (December), again in late Summer (February) and in Winter (June/July) to hold winter rains.
